OPERATIONS TASK TRACKING & AUTOMATION

Project Test Report | Portfolio Edition

Prepared by: Bhavika Vaishnav **Test date:** 03 November 2026

Project: Google Sheets-based recurring task tracking, pending-work monitoring, manager notifications, acknowledgement tracking and leadership escalation.

1. System Overview

The prototype uses Google Sheets and Google Apps Script to manage recurring operational tasks, record employee completion proof, monitor pending work, notify a manager about overdue tasks, track acknowledgement, and escalate unresolved tasks.

Recurrence examples: Daily, every 7 days, every 15 days and every 30 days. **Configured SLAs:** Manager alert after 30 minutes; manager acknowledgement SLA of 2 hours; leadership escalation delay of 4 hours. Temporary shorter values were used during testing and restored after the escalation test.

2. Test Cases and Results

Test	Scenario	Observed result	Status
TC-01	Dashboard setup and task visibility	Employee and Manager dashboards populated with the configured tasks.	**PASS**
TC-02	7-day recurring task completion (T002)	Completion proof was recorded; next due date advanced to 10-Nov-2026 and the next cycle appeared as Pending.	**PASS**
TC-03	15-day recurring task completion (T003)	Completion was recorded and next due date advanced to 18-Nov-2026.	**PASS**
TC-04	Manager alert for overdue task (T004)	Manager alert email was received. The test email initially appeared in Spam and was marked as not spam.	**PASS**
TC-05	Manager acknowledgement	T004 acknowledgement was updated to Acknowledged in the alert log and Manager Dashboard.	**PASS**
TC-06	Duplicate alert prevention	A repeat automation run did not generate a duplicate manager alert for the same task cycle.	**PASS**
TC-07	Leadership escalation	Leadership escalation email was received; the alert log recorded the escalation and timestamp. Manager Dashboard showed Escalated.	**PASS**
TC-08	Daily task due-date correction (T001)	T001 next due date was corrected to 04-Nov-2026 and verified on the Employee Dashboard.	**PASS**

3. Evidence Available in the Google Sheet

The prototype contains Task Master, Employee Dashboard, Completion Log, Manager Dashboard, Alert & Escalation Log, and Settings tabs. These provide task status, completion proof, acknowledgement status, escalation status and timestamps.

4. Notes for Review

Email delivery was tested using the candidate's own email address as the temporary manager and leadership recipient. Those test recipient fields were cleared after testing. SLA values were restored to 30 minutes, 2 hours and 4 hours.

This portfolio edition omits employer-specific names, recipient addresses and private prototype links. The underlying project functionality and recorded test outcomes are unchanged.
